

MATTIA ASTORINO

FROM
1988

Senior Design Engineer

I'm an Italian UI engineer with **over 18 years of experience** specialised in designing and building UI frameworks and design systems. This includes component design in Figma and their implementation in HTML, React and CSS.

My journey as a designer and developer has been self-taught but ultimately a passion turned profession. Programming and designing interfaces isn't just a job for me; it's a daily pursuit fuelled by curiosity and a keen eye for detail.

Currently, I lead the Design System at Lualtek. My responsibilities include overseeing the design and maintenance of the company's design system and developing the React-based UI component library and SaaS product. This ensures consistency scalability and quality across all product interfaces.

I'm particularly drawn to projects that demand meticulous user experience design technical robustness and a strong visual identity. I'm always eager to tackle new challenges where I can leverage my experience in building robust and reusable interface systems.

These are my latest public projects, designed and developed by me:

- design.lualtek.io — designed/developed components, tokens, themes, doc and the whole system
- lualtek.io — Lualtek's main website
- wanda.wonderflow.ai — designed/developed components, tokens, themes, doc and the whole system
- pagen.lualtek.io — just an experiment
- vira.build — formerly Material Theme
- dtexplorer.io — VS Code plugin that helps working with design tokens.

Please find my CV attached. You can also explore my work and profiles online:
